THE SMARTER CHOICE

STARTERS & ALTERNATORS

MPA Starters provide the confidence you need to perform every start perfectly. Tested to exacting standards, MPA designed and built computer-controlled testers to simulate real world conditions, to ensure reliability and durability.

MPA Alternators are manufactured to handle the ever-increasing power requirements demanded by today's vehicles. Every unit is designed, engineered, and manufactured and tested to exceed or meet OE specifications.

RADIATORS & CONDENSERS

- Vibration testing is used to simulate potholes, curbs and off-road use.
- Premium-grade materials used for ensuring added product longevity.
- Radiator core is tested prior to assembly.

IN STOCK AT ALL LOCATIONS!

- Premium-grade materials of aluminum and zinc are used for ensuring product longevity.
- All Condensers go through an intense high-pressure test to ensure there are no leaks.

by **Delphi** FUEL PUMPS

Delphi sets the standard for automotive excellence, Shield your vehicle with Sparta!

- **Fuel Pump Module Assemblies:** Engineered for performance and durability, ensuring your engine runs smoothly mile after mile.
- **Fuel Tank Sending Units:** Precision-engineered to deliver accurate fuel level readings, providing peace of mind on every journey.
- **Fuel Pump Strainers:** Protect your fuel system with advanced filtration technology, maintaining optimal performance.

Water Pumps, Hoses & Belt Kits

PROTECT THE RIDE

Backed with a 100% functional test of seals, bearings, and leakage on both the casting and assembled water pump.

Gates innovative EPDM Micro-V® belts are trusted by countless automotive technicians due to their quiet performance and wear-resistant construction.

Gates engineers OE quality and OE equivalent engine hoses for virtually every vehicle year, make and model.

AUTEL TPMS Sensors

Autel's patented press release valve design allows interchangeable rubber and metal valves to be easily replaced in the same sensor head by hand, with no valve fitting tool required. Simply click in and press out. Installing TPMS sensors has never been so easy.

Schrader TPMS Sensors

Schrader offers direct-fit replacement TPMS sensors that are 1-for-1 replacements for the sensors installed on the vehicle at the assembly line. Schrader's EZ-sensor® family of products can be programmed to service over 99% of vehicles.

TECHNICIAN TRAINING!

ADVANCED OSCILLOSCOPE ENGINE TESTING

This clinic will focus on the different types of electronic engine diagnostic procedures used to diagnose today's engines. Both incylinder pressure transducers and manifold vacuum transducers used with a digital storage oscilloscope (DSO) can reduce valuable diagnostic and teardown time on today's VVT equipped multi-cam engines. Engine performance and emissions can be severely impacted by cam timing concerns caused from lack of oil, failed timing chain tensioners and/or stretched timing chains or belts. Volumetric efficiency reductions caused by lack of air flow concerns from restrictions in the intake or exhaust systems can cause Low Power concerns. Engine compression issues can be significant in size or very small, almost undetectable at times, leading to misfire DTCs. Relative compression testing can reduce the time it takes to validate a compression issue on an engine. These types of problems can skew the diagnostic information in the scan tool and can make it unreliable or unclear. In this clinic you learn the benefits of using modern diagnostic equipment and when to use these testing techniques.
